EMPLOYMENT AGENCIES.

### CHART OF ABNORMAL MAGNETIC VARIATION.

Sudden and temporary aberration in lines of force of terrestrial magnetism, caused by conditions reote from the earth, deflect these force lines on the earth so that navigators. using charts of magnetic variaion, and comparing the indices of their ships' compasses with such charts, are thrown out of their plotted courses, and, in fog particularly, when the sole guides of the navigator are his compass and magnetic chart, the steamer is found to be some distance from her estimated position. The temporary variation lines shown in above chart are arbitrary and are used only to demonstrate the condition explained, and not to indicate actual conditions at the time of any particular collision. Normal variation is indicated by the full lines of the chart, abnormal and temporary aberrations by the dotted lines. Fog and ice are indicated by dotted area.

and so on to unity or infinity, we shall be be and sharp and unseasonal neither are movements of matter, any and lows and sharp and unseasonal neither are movements of matter, any more than the energy which puts the inchanges of temperature on the North changes of temperature of th

infinity unless they met with some resistance. But the outer circumsphere of the earth's atmosphere does offer such resistance, and hence such parts of these comet-excited energy waves in break on the outer shell of the earth's atmosphere must transmit to the mundane air part of their energy, much the same as wireless waves impart to the receiving apparatus such energy as is contained in the fraction of the wireless waves interrupted by the apparatus.

This intercepted, irregular energy novement communicated to the atmosphere of the earth can only come to quietude by exhausting its momentum. This it does in the various layers of the atmosphere, following the curve of its criginal impact, and thereby setting upstress of wind and variation of barometric pressure, the result of which is storm and variation of temperature at the earth's atmosphere does offer the earth's atmosphere in the irreduction of the mundane air part of their energy much the zame as wireless waves impart to the receiving apparatus such energy as is contained in the fraction of the present disturbed conditions is not yet in sight and navigating officers are urged to exercise the utmost care during the remainder of the summer. Collisions and groundings, explosions of magazines and ships' fires from the Danish ice chart; the reference to the abnormal 'heighs' in the northerns hemisphere is from the United States Weather Bureau charts. The end of the present disturbed conditions is not yet in sight and navigating of the summer. Collisions and groundings, explosions of magazines and ships' fires from the Danish ice chart; the reference to the abnormal 'heighs' in the United States Weather Bureau charts. The end of the present disturbed conditions is not yet in sight and navigation of the summer. Collisions and groundings, explosions of magazines and ships' fires from inflammanble cargoes are going to be far too common this year for the comfort of any one concerned.

Vanderbit Dwelling Leased.

Slawson & Hobbs, in conjunction with De Blois & Eldrid

storm and variation of temperature

at the earth's surface level.

A vessel under free way moves forward shead on her course, falls off to lceward and sets up a following suc-tion wave, or back wash. The leeway is caused by wind and tidal set, which, of course, are effects of energy in the air and sea. A comet freely moving in space would set up in the "ether" a similar set of motions. Going away from the sun, toward aphelion, the tail of a cornet streams cut shead on the line of headway; the falling of to leeward would be represented by the curve of the comet's orbit, the back wash by the "ether" waves set in mo-tion by the physical passage of the

### comet through the solar system ENERGY IN "TAIL" OF A COMET. TYPIST RECORD WON BY

I think I have proved, in a series of scientific articles of easy access, that the so-called "tail" of a comet is really solar energy processed or recessed space by the spherical head of the solar energy processed or recessed in space by the spherical head of the comet acting as a great celestial lens. But whether this explanation or the other, that the "tail" of a comet consists of ionic particles of matter electrically repelled from the head of the comet by the effect of the rays of the sun, be the actual condition, the effect of the expensive of the count by the omet by the enect of the rays of the sun, be the actual condition, the effect of the sweeping of the earth by the "tail" of a comet in passing would be the same—a stream of energy strikes the atmosphere of the earth a blow of great force and abnormally upsets its dynamic electrical and magnetic congreat force and anormally upsets its dynamic, electrical and magnetic constants of equilibrium. Air and water respond to the effort of adjustment to this energy blow more quickly and easily than the solid structure of the earth itself, and this effort of adjustment is represented by severe wind, electrical and water storms. Of these

that the five vessels netually were contact, but by the effect of their passes on the constant of solar dynamic force.

EARTH'S RUSH THROUGH SPACE, the considering these factors let us consider the earth itself and its manner of passage through space. It is not the solid surface of the earth at rushes through space, but the outer circumsphere of the earth at most density appears to decrease in prohabere. The atmosphere is a sort of spherical, aerial tire for the carth and its density appears to decrease in prohabere of the earth. If this is true, the outer of the earth, if this is true, the outer that setually revelves in contact with the "ether" and which moves forward through it, must be very diffuse and thin if the proportion of decrease in prontinuous.

Whether this be the case, or that there are "reversing layers" in the air, to that the messure and density of air on the circumsphere of the atmosphere is greater than on the surface of the earth, it is quite apparent that every impact of energy external to the earth must reach it through its atmosphere. No matter how light and tenuous the lody of a comet may be, it must be beavier and more dense than the "ether" it passes through. Otherwise the comet head would be dissipated by the resistance offered.

Such being the case, a comet rushing at great speed through the "ether" precisely as a vessel under way sets up a back wash. These waves would move forward through space to infinity unless they met with some resistance. Ent the outer circumsphere of the earth's atmosphere does offer such resistance, and hence such parts of these comet-swelded energy were such resistance. Such being the case, a comet rushing at motion of the charts printed the passes through the "ether" it passes through the "ether" would set up waves of force in the "ether" it passes through the "ether" would set up waves of force in the "ether" it passes through the "ether" would set up waves of force in the "ether" it passes though appears to the carth's atmosphere of the carth's atmosphere

Slawson & Hobbs, in conjunction with De Blois & Eldridge, have rented for a term of years for Mrs. Virginia Vanderbilt and Mrs. Alice Oeirichs the five story forty-foot American basement dwelling at the corner of 75th st. and Riverside Drive to R. M. McCarter.

## **GLYNN SEES HARM** IN NEW FIRE LAWS

### Says Realty Men Suffer from Measures-Won't Talk of Hearst.

Governor Glynn believes that the Triagle fire, where some 147 men, women and girls were killed and the Binghamton factory fire, where the loss of life was heavy, caused the enactment of laws that have worked hradships on the real estate and factory owners. "Of course," said Governor Glynn, am for safety of the laboring people in factories, but I think we have gone too far and provided for emergencies that might happen once in a thousand

These comments on the building law were made by the Governor yesterday one of the guests of the Police Benevolent Association. Mayor Mitchel, members of the Board of Estimate and
others of the Mayor's official family,
also attended the luncheon.

"What do you think of William R.
Hiearat as candidate for United States
Senator?" he was asked.

"There are some thing I do not think
about," said the Governor.

He said he was not a candidate for
the United States Senatorship.
